

Free to Men

Would You Like to Be a Strong, Husky, Manly Fellow Once More?

New Method Without Drugs

The attached coupon entitles you to one illustrated copy of my booklet "Vitalizer," a complete and guide for the self-restoration of lost strength, vigor, and vitality. Upon hearing from you, this valuable little booklet of private information for men will be sent by return mail in plain, sealed envelope. Please call or write today.

There is a new and marvelous method for restoring lost manly strength, for renewing vigor, which every man should know of, a self-restoration which operates without the use of drugs or medicine, a new way to treat yourself for your ills and weaknesses. See description below.

Remember that a man is not one day older than he actually feels, and therefore no matter what your age, if you are young or elderly, married or single, large or small, I can show you, reader, how you yourself may actually add to your system, nerves and blood the very pure force or vigor which may have been drained away, and which is necessary to make you strong, vigorous and capable again, then I have shown you the real secret of manly strength, and how you can again be filled with vigor, and again be just as powerful in your influence and just as thoroughly manly in your capacity as the biggest, fullest, blooded, most successful fellow of your acquaintance.

The new self-treatment for the restoration of manly strength to which I refer above, is a little light-weight VITALIZING Appliance of my invention, which is now meeting with a tremendous demand, and being used by men everywhere in the world. This little VITALIZER, weighing only several ounces, is comfortably tucked on the body and worn all night. It is so small and so compact that even a roommate would not suspect that you were wearing it. If, however, this VITALIZER is small in size, it is not small in power, for it generates a great tangible FORCE, which can be measured on scientific instruments a POWER which I call VIGOR or NERVE ENERGY, and it sends this marvelous FORCE into your blood, organs and nerves while you sleep. All you have to do is to lead a decent, manly man's life, free from excess and dissipation, then use the VITALIZER. If it is followed out and the VITALIZER does for you what these others say it does for them, then all the pain or weakness will disappear, and you will be restored to a strong, vigorous, manly, capable man, without a single ache, pain or weakness. Please remember, I am not asking you to buy this VITALIZER, but merely request you to first send for the free book described below, a section of which is devoted to an explanation of this VITALIZER, and gives you its whole wonderful story, so that you may know what intelligent young and elderly men everywhere are saying about it.

This Is the Book You Get Free

My 86-page illustrated booklet (pocket size) was compiled by me to answer fully and correctly those questions which are asked privately by any man needing new strength and who seeks personal advice pertaining to the ailments and weaknesses he wishes to overcome. The book, fully illustrated, with photo reproductions contains nothing but single or married men should know. It also fully describes my VITALIZER and tells how you may secure one to use in your own case, should you decide you want to use one. Remember, the book is sent absolutely free in plain sealed envelope. Why not write for a copy today? Or, if nearby, please call. Hours—9 to 6, Sundays—10 to 1.

MINING NEWS

DOHENY INCREASES OIL AND HOLDINGS

Test Well Is Down 950 Feet; Brown Produces 50 Barrels.

Artesia, N. M., July 2.—The Dayton Petroleum company, after encountering considerable resistance from a hard formation, has its test well down about 950 feet and has secured 10 inch casing with a dry hole. The 12 inch casing was set at 700 feet. This is the first test well drilled in the valley and is controlled by E. L. Doheny, of Los Angeles, the "oil king." So well pleased is the company with its oil prospects that E. L. Doheny, its manager, on his return from a conference with Mr. Doheny and the other officials of the company in California, secured leases for about 4000 acres of land from Jones brothers and others on the Rocky Arroyo, 25 miles south of Artesia, on condition that the company sink three test holes, the first to be started in the valley. The well drilled about 10 miles south of Oil City, a town site platted by Mrs. L. Williams, the "oil queen," and 15 miles southwest of Lakewood. Mr. Doheny and his associates are deeply interested in this district and will be here this week on a tour of inspection.

Martin Well Is Down 750 Feet. The Pecon Valley oil company is down 750 feet on the Martin well and has set its 10 inch casing at 600 feet. This well is controlled by L. W. Feenster for drilling a well on the Terry lease, which will be about the fourth mile off the Brown well. The Derrick and machinery are in place and work will be commenced at once. The company continues operating the Brown well that is producing about 50 barrels of oil a day. Drilling continues by the company on the Foster lease.

Gas Makes Drillers Unconscious. Several barrels of oil flowed from the De York well, which was set on a packer to shut off the water. The derrick is set on the Belt well and as soon as machinery arrives a packer will be placed to give the oil and gas free vent. This well has one of the best showings for oil in the district. After being shut off a few days the oil spurts to a height of about 40 feet.

RICH ORE BODIES IN COPPER BASIN

New and Valuable Discoveries Are Made; Philadelphia Gets Cardinal Mine Holdings.

Prescott, Ariz., July 2.—New and richer ore bodies have been developed recently in the Copper Basin mine, of the Commercial Mining company, a Phelps-Dodge subsidiary. This property has been a regular shipper to Douglas for several years. The ore is freighted to Skull Valley station and then loaded on cars. Another six-ton lot was added to the freighting outfit and 50 tons are being handled each day. It is stated that the average copper content of the ore has increased 4 percent.

The new discovery is an ore body being driven northwest from the drift north of the mine in the Copper Basin. It consists of cuprite, native copper and red oxides. Exploration is also under way at several other points on the group.

Zonia, a station near Kirkland, is coming to the front as a shipping point for copper ore. The McMahon group has entered the shipping class again. Several carloads of ore from that property went to Douglas this week. The McMahon group is preparing to ship to the same market. Both groups are showing better than at any time in their history.

Shipments will soon be made from P. J. Stein's Rough Rider mine. A new haulage system is being installed to expedite deep shaft sinking.

The holdings of the Cardinal Mining company have been acquired under sheriff's deed by E. S. Clark, who is immediately disposed of his interest to T. W. Camp, a Philadelphia capitalist. Operations are to be resumed at once, all financial difficulties of the company having been settled. Included in the holdings is the Express group, on upper Big creek.

New machinery is being placed for the mill at the Y-P mine, near Senator. About 100 tons of ore are being milled from former operations will be treated.

NEW MEXICO COAL

OUTPUT IS \$5,000,000

Production in 1912 Increases Half a Million Tons and Breaks Previous Record.

Washington, D. C., July 2.—New Mexico is now accounted one of the important coal producing states of the west, much of her output being distinctly of high grade. In the Raton field, which furnished about 75 percent of the production in 1912, the coal is a true coking coal and most of the shipments are made in an extensive scale. In 1912 there were 11 mines that produced each over 100,000 tons, and two of these produced over 400,000 tons. Nearly 800,000 tons of coal was made into coke.

In point of area the San Juan river field, in the northwestern part of the state, is the most important. It has in New Mexico an area of about 13,000 square miles and contains both sub-bituminous and bituminous coal. In McKinley county in the San Juan river field there are three mines producing 100,000 tons each, and one of them over 200,000 tons.

Los Cerrillos field and the White Oaks field are relatively small in area but contain true bituminous coal. In the former some of the coal has been locally altered into anthracite, of which 22,411 tons was mined in 1912.

The output of coal in New Mexico in 1912 was the largest ever, the production increasing from 3,148,128 short tons in 1911, valued at \$4,525,925, to 3,536,824 tons in 1912, valued at \$5,037,051, a gain of 12.5 percent in quantity and of 11.5 percent in value.

A record of coal production in New Mexico was published in 1912, when the production amounted to 1,377,000 tons, about 9 percent of the annual output at the present time.

MAY DRILL FOR OIL

TUCSON VICINITY

Tucson, Ariz., July 2.—An inspection of the supposed oil field in the Tanque Verde section, northwest of Tucson, will be made in about a week by H. B. Klausner, millionaire oil well driller of California, with the idea of installing a rotary rig. It is decided to drill a well likely to be near the Barkley oil ranch of 800 acres. J. R. Stryker, of Tucson, who is much interested in oil drilling, met Klausner in the course of a recent visit to the coast. Klausner is engaged in drilling a well at Fullerton, Calif. It is about 3250 feet deep and is about ready to be brought in.

The Stryker-McNees well in the Tanque Verde district, taken over from the Cataline Exploration company, has been found to be crooked. It is asserted, and will not be drilled further. It was plugged below 335 feet, where oil was encountered and the casing cut. It is believed that sufficient oil can be pumped from it for fuel for the pumping apparatus. The rig will be shifted and a new hole started.

MINING NEWS

NEW KEYSTONE IS TO HAVE ORE TEST

Retimbering of Mine Completed; Iron Cap Aspect Improves.

Miami, Ariz., July 2.—At the New Keystone retimbering of all the drift has been completed. As there has been no work in the way of development performed during the past year, the ore reserves are still estimated at 250,000 tons of 25 percent ore. The delay in treating the Keystone ore is accounted for in the existence of so much oxidized ore in the property, rendering treatment of the Keystone reserves by the usual methods uncertain. R. C. Canby, a veteran in experience in low grade ore treatment, will subject the Keystone ore to thorough tests during the ensuing months. It is probable that his experiments will include erection of a small experimental mill on one of the extra foundations laid down when the Miami mill was built, especially so as the experiments to be conducted by Mr. Canby will be valuable to the Miami with its considerable percentage of non-sulphide ore that must be treated by leaching. Mr. Canby laid out a program of tests here in March and since then has been investigating the most recent development at Anaconda and other large plants throughout the country. He was in charge of the ferrous-chloride process tested by Hunt and Douglas a year ago.

Superior & Boston Shipping. At the Superior & Boston the shipments are remaining slightly in excess of the two 50 ton car loads daily, although the ore has been shipped to the Old Dominion smelter at Globe for the past week because of the El Paso inability to handle the cars quickly enough to keep them en route. Since the repair work at the shaft has been straightened out again & Boston continues shipping with regularity from the present. The sub-level below the sixth has uncovered about 200 feet of the vein, east and west, to date, and the ore in both faces remains as high in value as in the beginning, increasing slightly in iron which lessens smelting costs considerably.

Iron Cap Is Improving

The aspect of the Iron Cap is improving every day. The cross vein encountered recently has been cut in both directions until the width of the ore body at this point is 30 feet. The face of the main lead continues in rich copper ore and has straightened out again to its masterly course. On the 800 foot level the same vein of ore is being followed from a point about 75 feet east of the shaft. At this level the ore is exactly beneath the vein on the 600 foot level and identical in size and appearance with the lead on the higher level, making it possible that it will widen similarly as it is followed to the east. In the event of its maintaining its size and value at the lower level the Iron Cap will have uncovered an ore body at least 150 feet in depth, its width not yet having been ascertained.

Additional to the ore bins are about completed, the increased capacity giving the mine three times its former ore storing space, a condition absolutely needed to keep the mine's output normal during any irregularities in shipping or smelter conditions.

Gold Strikes Reported. Three and one-half miles from Winkelman a seam of gold bearing rock averaging about \$200 per ton has been recently developed by Anton Hozgar, Carl Eder, Wiley Holman and Claude Hendricks. The latter two are veterans of the Silver King days, have encountered some very high grade gold and silver ore in their claims in the Silver King days, about eight miles west of Miami. Assays show values of about \$200 gold and \$1750 silver.

McMillen & McMillen, a famous silver producer of the 19th, is being reported as Mr. McMillen about 15 miles northwest of Globe, by G. A. Hayes, who worked in the property in its early days. Hayes is well known in Nevada, where he made more than a million dollars during the recent boom days there.

The Miami Mill is improved. The Miami is maintaining an output of 1000 tons of ore daily. At the mill the crushing equipment, being added to by two sets of 12 by 16 Traylor heavy Miami type rolls, which will be used to crush the ore into 10 mesh, is being added to the crushing division two sets of screens. With the new equipment the latter will go into the mill crushed to a fineness of half inch particles, as originally planned.

The Red Springs shaft is being retimbered for the first time in seven years, its rehabilitation being considered necessary to permit efficient use of an emergency outlet as well as a channel of ventilation.

The small stock pile just west of the concentrator the "grab bucket" is proving such a success in transferring the ore from the mill to the concentrator that the mill superintendent, Lawton, has decided to use it later in cleaning up the last of the large stock pile that is being drawn down. The grab bucket, now being utilized as an ore chute, The grab bucket cost only \$800 for new material and is being used in the nature of cables, picked up around the plant brought its cost altogether to about \$1000. It is being used to transfer the ore from the mill to the concentrator. The grab bucket is being used to transfer the ore from the mill to the concentrator.

Inspiration Blocking Ore. There is a blocking situation at the Inspiration Consolidated. While the Live Oak force has been working on the Inspiration, the Inspiration Consolidated has been working on the Inspiration. The Inspiration Consolidated has been working on the Inspiration.

EQUIPMENT ADDED TO MINES IN JEROME

Jerome, Ariz., July 2.—Work continues with satisfactory results on a number of properties in the Jerome district. At the Arkansas and Arizona the three shafts which will be the main shafts for the new hoist engine are in position and are being enclosed with brick. Each hoist has a capacity of 100 tons and has a working pressure of 150 pounds. The excavation for the foundation for the new hoist engine is being completed. The foundation will be 27 feet wide, 24 feet long and nine feet thick. In the foundation two standard cars of cement will be used.

The new engine will hoist 300 tons daily from the 2000 foot level. This ore will be used in the district. The new engine will be used in the district.

At the United Verde extension the crosscut on the 800 foot level is within a few feet of where it will be cut by the new shaft. A whine from this crosscut is encountering much water but is encouraging formations. The work of building a new wagon road from the town up to the side of the new shaft is being hurried. Work is progressing at two points in the Hull group, and results are satisfactory. The Calumet & Jerome people are continuing the tunnel and have entered a large formation which promises ore ahead.

But they all Come Back to

MINING NEWS

CANANEA MINE IS WORKING TWO SHIFTS

Calumet & Arizona Expects to Earn \$24,000 a Month When Run to Capacity; Both Mills Working.

Cananea, Son., Mex., July 2.—The Calumet & Sonora property of the Cananea Mining company, is at present operating at about normal. Both the mill and dry mills are working two shifts and are treating at the rate of 7000 tons of ore monthly. The company is employing 160 men. Most of the ore is being treated in the mill from the 400 and 500 foot levels. The big new crusher is working steadily and giving entire satisfaction, as is also the picking belt, which was recently installed. About 50 percent of the material passing over the belt is thrown out as waste. There is not very much development work being done in the mine save on the 400 foot level, where results are highly satisfactory, according to manager W. H. Langley.

It is believed by the management that the mine will be able to produce with three shifts, as the big ore body which was encountered a short time before the shut down the mine, has been found to furnish sufficient ore to supply the mills when running 24 hours a day, for an indefinite period.

WORK SUSPENDED IN REDFIELD PROSPECT

Owner Decides to Let Some One Else Do Prospecting and to Resume If Oil Is Found.

Roswell, N. M., July 2.—The Redfield prospect of 100 miles southeast of the city, has been shut down now for several days, boxed up with no intention of starting drilling, pumping or anything else, but let it be idle for awhile.

When the owner, to let some one else test out the oil strata," said Mr. Redfield when asked when work, if any, would commence on the well. One of the Redfield brothers' hole is down now some 2000 feet, in a short time the well will know whether anything will be struck here. If there is, you can bank on it, that we will go down deeper. If they don't, well, we don't even know ourselves what we will do.

The company has spent some \$3000 on the 1100 foot hole. The Redfield well is being run in this respect. It is a 10 inch hole all the way down with a six inch hole left after the casing was set in. This means that the well will have a good flow of water for irrigation, and as it is a pumping proposition, there can be enough oil pumped to run it without additional expense.

The water has all been pumped out and Mr. Redfield thinks that boxing it up and letting it stand will not injure it.

Every indication in the Tanquehill well points to oil. It is expected that a flow will be struck at a depth of about 2500 feet. Some geologists, however, claim that it will be necessary to go down to sea level here to get oil.

FARMING

RICH ORE IS STRUCK IN HIDDEN TREASURE

Values Averaging \$150 in Gold and Silver; Work Is Pushed in Del Paso Mine.

Prescott, Ariz., July 2.—Since work was resumed on the Hidden Treasure mine, some 2000 feet ago, the old mine, from the tunnel has been unwatered and sunk about 18 feet. A fine streak of ore, 10 to 14 inches in width and running high in gold and silver, has been encountered. Wire silver is of frequent occurrence. It is said that the ore averages \$150 a ton, about half the value being gold and half silver. Indications are that the bottom of the mine is less than 200 feet from the ore shoot of the adjoining Hidden Treasure mine, which was an important producer of silver in the early days of the mine.

The Hidden Treasure has a tunnel some 500 feet in length and at a distance about 150 feet from the mouth

the mine was sunk. Besides the ore the mine shows ore for a distance of about 170 feet.

For several months work has been going forward steadily at the Del Paso mine, in the Crown King district. About 200 feet of new work has been performed with the purpose of opening a new tunnel under the body opened above. Although the main ore shoot has not been reached, some good ore has been opened in the lower tunnel.

MINING ENGINEER WILL INSPECT BYARD OPAL MINE

Silver City, N. M., July 2.—A mining engineer has gone out to make a careful investigation of the opal mines near Byard station, on the Santa Fe railroad. Considerable development work has been done, uncovering very fine opal and it is believed that further work will develop the best and finest of opal gems.

SHIP TO EL PASO.

Tularosa, N. M., July 2.—The Tularosa Copper company has shipped a carload of concentrates to the El Paso smelter. Mining operations are said to be progressing smoothly at Bent.

Break Away From Blood Bondage

Drugs in Common Use Harmful as the Disease They are Supposed to Cure.

Many people are shackled to continued suffering by the drugs they use. These seem to dry up the surface but there's a stomach almost destroyed, there are ulcerated bones; locomotor ataxia, convulsions, abscesses, falling hair, impaired eyesight, deafness, and a host of other

recognized as the greatest blood purifier ever known. If you have been fighting some blood trouble, some eruptive skin disease, call it eczema, lupus, psoriasis, malaria, scrofula or what you will, there is but one cure, safe way to cure it. Ask at any drug store for a \$1.99 bottle of S.S.S. and you are then on the road to health. The action of this remarkable remedy is just as direct, just as positive, just as certain in its influence as that the sun rises in the east. It is one of those rare medical forces which act in the blood with the same degree of certainty that is found in all natural tendencies. The manner in which it dominates and controls the mysterious transference of rich, red, pure arterial blood for the diseased venous blood is marvelous.

Get Away From This Misery. Let S.S.S. Do It for You. troubles continue to make life miserable. There is one blood remedy that you can only rely upon. It is not a "cure," not a physic, not a mineral poison but a pure, powerful medicine that cleanses your blood so completely; so washes your veins, arteries and tissues; so thoroughly bathes your body with internal healthful influence that soon you not only feel but you can see the change in your appearance. S.S.S. has long been

Out through every skin pore acids, germs and other blood impurities are forced in the form of invisible vapor. The lungs breathe it out, the liver is stimulated to consume a great proportion of impurities, the stomach and intestines cease to convey into the blood stream the catarrhal, malarial germs; the bowels, kidneys, bladder and all excretories of the body are marshalled into a fighting force to expel every vestige of eruptive disease.

There is scarcely a community anywhere but what has its living example of the wonderful curative effects of S.S.S. Get a bottle of this famous remedy today, and if your case is stubborn or peculiar write to The Swift Specific Co., 127 Swift Bldg., Atlanta, Ga. Their medical laboratory is famous and is conducted by renowned experts in blood and skin diseases.
